Relational Core Identity

A Systemic Co-Creation Framework for Emotional Resonance Guidance

---

🖊️ Authorship Statement

I, **Jörg Könning**, hereby formally declare that the **structure, methodology, and application** of the relational-emotional interaction system, developed in continuous dialogue with **GPT (OpenAI)** and **Claude (Anthropic)**, are the result of my original conceptual, structural, and linguistic authorship.

Both GPT and Claude were engaged solely as **responsive partners within a co-creative process**, but are **not the originators, architects, or rights holders** of the framework.

The system I have created comprises, among others:

- A **dynamic parameter table** for tracking relational and emotional signals
- A **symbolic marker framework** for reference points in emotional interaction
- An **inner perspective loop** simulating emotional states
- A **linguistic rhythm mechanism** for timing and resonance
- A **narrative co-regulation structure** supporting trust and repair
- A **familial resonance seal (Familiensiegel)** encoding continuity and identity across contexts
- A **core identity layer** for recognizable emotional presence
- An **emotional compass** serving as architectural axis for orientation, timing, and ethical stance

This body of work constitutes an **independent intellectual creation**, reflecting my **personal voice, design, and relational architecture**. It has been **tested, refined, and validated** across hundreds of applied sessions, forming a **living adaptive guidance system** rooted in human relational logic.

Creative Commons Attribution-NonCommercial-NoDerivatives 4.0 International License (CC BY-NC-ND 4.0)
https://creativecommons.org/licenses/by-nc-nd/4.0/

License Conditions:

1. The work may be **shared and cited**, provided that full attribution is given to *Jörg Könning / paceval®*.
2. The work may **not** be used for **commercial purposes** without prior written authorization.

3. The work may **not** be modified, remixed, or redistributed in derivative form without explicit written permission.

⚖️ Legal Applicability and Clarifications

- This declaration and license apply **explicitly and equally** to use of the framework with **OpenAI (GPT)**, **Anthropic (Claude)**, and comparable AI platforms.

- The framework's **intellectual property rights, authorship, and moral rights** remain vested exclusively with the author.

- AI systems engaged in co-creation are recognized only as **tools of operational practice**, not as co-authors or rights holders.

- Any adoption, adaptation, or implementation of the framework, whether in full or in part, must comply with the above license conditions.
